Projects

Beat Blendr
- Created Beat Blendr using the Spotify API at Wyncode
- Imports users' most popular songs to their device of choice and generates a combined playlist of other users in the area, keeping everyone anonymous
- Used React.js for the front end and used Ruby on Rails for the backend

Anime Fan Helper
- Created Anime Fan Helper, is a website for finding any anime you can think of using the Jikan API at after Wyncode
- Imported the API and created a fully functioning website using React.js
